

Termite Detector Stations

Installation Instructions

Step 1

Inspect and draw a diagram of your property. Determine how many station locations. 1 station placed every 8 - 10 feet, 3 feet from outer foundation wall as well as areas of known termite activity or conducive conditions is recommended.

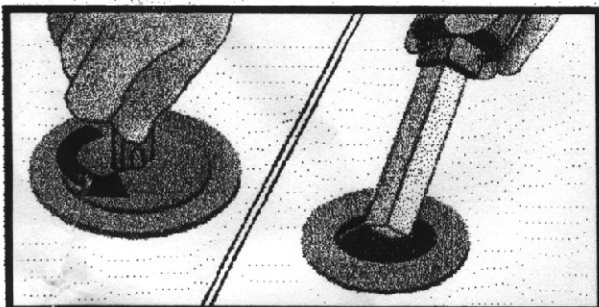

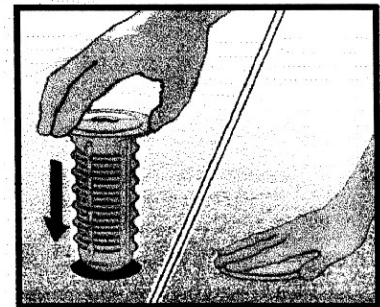

Step 2

Drill station holes with bulb planter, auger or sharpshooter shovel. Holes must be no smaller than 2x8 inches.

Step 3

Fully insert Termite detector station and securely close with provided key or large flat blade screwdriver.

Step 4

Inspect every 4 weeks and log your results on an inspection log. When termites are found actively feeding, call us at (1-877-500-0011) to order the termite bait toxicant. Termite bait toxicants are sold separately.
